SUBJECT: System XVII

This is the data on System XVII. I think you will find most of the details for which you are looking in this package.

25X1A We are duplicating some of these receivers for another system which 25X1A is putting together and A.C. is using this material to specify the various other parts of his system. It would be helpful if you would return this package to 25X1A as soon as you have abstracted the data you need.

25X1A please let me know if more information is required. 25X1A
25X1A can bring you up to date on any changes that have been made since this material was written.
